Abstract (en)
A simple and effective mask maintaining warmth in the nasal area is disclosed for preventing, relieving, or eliminating the occurrence of the symptoms of allergic nasal inflammation due to hay fever or the like. The mask maintaining warmth in the nasal area comprises a main body in the form of a sheet, a nasal area warmth-maintenance portion for covering at least the nasal area and being provided in a central portion of said main body, and straps for attaching the mask to the face. The nasal area warmth-maintenance portion has an upper end portion protruding from the upper end of the main body, and said upper end portion covers at least the upper portion of the nasal area. The main body and the nasal area warmth-maintenance portion may be formed unitarily or separately. Allergy symptoms are relieved, eliminated, or prevented because the nasal area warmth-maintenance portion can effectively maintain or add warmth to at least the nasal area. <IMAGE>
