Abstract (en)
The device comprises a surface or sliding board (1) having a motor and a caterpillar or tilting endless belt to be used on snow or similar grounds. Said board has a central longitudinal open space wherein is open space wherein is mounted a tilting structure (6) with rollers (8) by means of a support with axis (4, 13), said rollers supporting and guiding the belt or caterpillar (7). The motor and variator assembly, installed prior to the support and axis (18), transmits the motion to a tractor roller (9) which causes the rotation of the belt or caterpillar. The tilting system is provided with a shock absorbing device (10) and a system for making inoperative the belt or caterpillar. By means supports with fixing elements for the feet (21) and an acceleration control device, the board can be directed. <IMAGE>
