Abstract (en)
The invention utilizes ink jet liquid droplets (20a) from one or more printer heads (10) to form an image upon the surface of a printing plate (15) corresponding to digital information depicting the image as provided by a digital computer system which is in digital communication with the printer heads. The droplets from the printer head comprise resin forming reactants which polymerize on the plate surface, alone or in combination with reactants precoated on the plate, to form a printable hard resin image. The resin image so formed provides a lithographic printing plate useful for extended print runs. <IMAGE>
