Abstract (en)

[origin: EP0777153A1] There is disclosed a silver halide color photograph light-sensitive material comprising a specific hydrazine derivative, as a color-forming reducing agent (an agent for color-developing), a dye-forming coupler, and a sulfinic acid compound. The light-sensitive material comprises the color-forming reducing agent built therein, it is suitable for rapid processing, and it is suitable for remarkably reducing both the replenishment rate and the processing chemicals. Further, the light-sensitive material can restrain from stain to occur due to the long-term storage of the light-sensitive material, and it can keep the clarity of an image.
