Abstract (en)
[origin: WO9607605A1] There is described a collecting container (1), comprising a supporting element (2) and a collecting chamber (10) with side walls (15), a front wall (16) and a rear wall (17), which collecting chamber (10) is pivotable relative to the supporting element (2) about a substantially horizontally directed pivot (6). The bottom (14) is fixedly mounted on that supporting element (2) and extends forwards and upwards from that location according to a portion of a circular arc, the center of that circular arc lying on that pivot (6). The walls (15, 16, 17) of the collecting chamber (10) define a tube whose outer ends (11, 13) are entirely open. At its lowest point, the bottom (14) can be connected to an outlet pipe (32).
