Abstract (en)

[origin: WO9605353A1] Cellulose-containing fabrics or textile may be desized without essentially damaging the fabric or textile by subjecting the fabric or textile to a treatment with a certain type of cellulolytic enzyme, e.g. a cellulolytic enzyme having an activity on carboxymethylcellulose (CMC) and a catalytic activity on cellotriose at pH 8.5 corresponding to kcat of at least 0.01 s⁻¹ and preferably being of microbial origin, more preferably being obtainable by or derived from a strain of Humicola, Trichoderma, Myceliophthora, Penicillium, Irpex, Aspergillus, Scytalidium or Fusarium.
