Abstract (en)

[origin: WO9607811A1] The invention concerns a climbing device which can be detachably secured to a building. Said device comprises a ladder member (1) and a securing arrangement which has at least two securing brackets (5) which are mounted on the ladder member (1) and can be suspended in securing lugs (9) on the building (B). One of the securing brackets (5) has an opening (13) and the corresponding securing lug (9) has a lock bolt (14) which, when the securing bracket (5) is introduced, is urged away and springs back into the opening (13) as a result of spring force when it has been passed by the securing bracket (5).
