Abstract (en)
[origin: WO9608000A1] The present invention concerns a proof-of-entry device and a badge which is suitable in particular for such a device according to the invention. The proof-of-entry device substantially comprises a badge (2c) and a validation component (3c) which, in a particularly preferable manner, are integral. Advantageously the validation component (3c) is detachably secured on the badge (2). This component is preferably as wide and/or as long as the badge and carries, for example, a chip, magnetic strip, bar code and/or a holographic image. The claimed badge, which is in particular suitable for a proof-of-entry device of this type, has a pattern support, a counter-member, a hinge connecting the pattern support and the counter-member, and a retaining element which, when the counter-member has been folded behind the design support, substantially secures these components.
