Abstract (en)

[origin: EP0777986A2] The trolley has two covers (18,20) moveable between closed and open positions to cover an adjacent bar grip (26). The bar grips upwardly pivot from the second of two guide rails (22,24). At least one guide rail device (22,24) is allocated to a locking arm (36) pivotable about a horizontal axis transverse to a lid sliding direction. A locking element (58) attached to the vehicle body is provided to work together with a second locking element (56) on the locking arm such that the locking device of both elements is releasable through upward swinging of the locking arm. Each grip bar (26) is rotationally mounted to its neighbouring second guide rail and that this is coupled with the grip bar to upwardly swing the neighbouring locking arm.
