Abstract (en)
A toilet height conversion structure for use in combination with a toilet (2) having a rear portion and a supporting frame (30) which includes at least a substantially horizontal support member (52) and a pair of substantially vertical inner support members (128). The structure consists of a mounting block (8) positioned at the rear portion of the toilet and a riser (3). A transverse channel arrangement (58) is formed in the mounting block (8) for securing the horizontal support member (52) and preventing transverse movement of the frame relative to the toilet. The mounting block is also formed with a lateral channel (156,158) arrangement for securing the pair of vertical inner support members and preventing lateral movement of the frame relative to the toilet. An adjustable connecting arrangement is formed in the mounting block for securing thereof at the rear portion of the toilet.
