Abstract (en)

[origin: EP0778215A1] The method involves tilting the pallet by swinging the feet outwards on pivots at one end. It uses a pallet comprising a panel (11) with feet (12). The free end of the pallet is equipped with jacks which allow its height from the ground to be adjusted relative to the end of a ramp (37,38). It also has stops (36) to prevent the load (19) from sliding down the ramp before it is to be unloaded.
