Abstract (en)
[origin: EP0778454A2] The firearm has a lock (2) movable in a casing (1) between front and rear positions. The cocking slide (4) can also move in the casing. It has a handgrip (10) permanently projecting from the casing supporting the front of the cocking slide. A closing spring (3) loads the lock and slide forwards, so that the lock can be moved to the rear position when the cocking slide is moved back, and back to front position when it is moved forward. There is a locking device (9,13) to hold the cocking slide in its rest position. The handgrip can turn on the cocking slide and has a hook (9) to engage it to the inner casing (5,13).
