Abstract (en)
The safety switch includes a control rotor (20) which is rotatable about its axis to operate a plunger actuating the contacts. The key can be inserted into either of two notches (24,25) via respective slots (14,16) in the head (12). The spring-biased locking bolt (40) is lodged in the head for movement at right angles to the axis of the control rotor so that it enters a blind hole (26). It is released by the cam formed on the surface of an unlocking element having twin rotors (e.g. 30a) on either side of the control rotor.

Abstract (fr)
La pièce de déblocage 30 est applicable au moyen d'une surface de came 33 contre un verrou 40 engagé dans un cran 26 du galet de commande 20, de manière à libérer le galet à l'introduction de la clé. <IMAGE>
