Abstract (en)
A depilatory wax heating apparatus. Heating means (11) allow the ideal melting temperature for the wax contained in the applicators (6) to be attained. Said means consist of bars (12) connected to a conductor (13), said bars being made of an electric conducting material, designated PTC, serving as a heat controlling element. The apparatus is applicable for heating depilatory wax application case and for thermally controlling the ideal melting temperature of the wax for an unlimited period of time. <IMAGE>
