Abstract (en)
An improved massage-like application device for a fluid product on the skin. The device comprises a head (1) for dispensing a fluid product and a case (2) containing said product, associated to form a unit through suitable means providing for an internal communication between both elements for the purpose of dispensing the fluid. The head (1) includes an application roller (15) with its general surface provided with a plurality of drop- or sheet-like embossments (17). The device is applicable for massage-like spreading of a lotion or the like, exfoliating dead skin cells. <IMAGE>
