Abstract (en)

The bag consists of a central section with two shoulder straps. A bellows section (11) can be deployed to increase the size of the bag and is equipped with two handles. The shoulder straps can be folded away in an end pouch (7) which goes against the back of the wearer when the bag is used as a rucksack. The bellows section is held in its folded position by a sliding clasp fastener. The fastener is divided in two parts at either end of the bag when it is deployed to form a hold-all. The two handles of the hold-all are made in the form of strips of a supple material which have flat ends joined to the bellows section and are made into tubes between the ends. In between the two handles, the hold-all has an additional pouch (12) with a sliding clasp fastener (13).

Abstract (fr)

Un élément de bagage à plusieurs modes d'utilisation comporte un compartiment central 1 et deux bretelles 6a, 6b de portage dorsal. Le compartiment central 1 est extensible après libération du soufflet 11 déployable portant deux moyens 16a, 16b de portage manuel. <IMAGE>
