Abstract (en)

[origin: EP0779230A1] The rubbish bin (A) is installed in cupboard furniture (1), and has a container (2) with a lid (9). The container can be moved to a position (I) which is outside the cupboard, and in which it can be used. The lid is preferably fixed relative to this movement. The bin can be transferred via a position (II) in which it is retracted into the cupboard, and into a position (III) in which it is offset further backwards in the cupboard. The container may be able to move outside the cupboard relative to a supporting frame (5), which may also move with the bin between the retracted and further-offset positions.
