Abstract (en)  
[origin: EP0779484A2] The refrigerator and/or freezer appliance has a drawer (6) to hold the produce or items for refrigeration and/or freezing. When the opening/closing mechanism (28) is operated, the drawer (6) moves out automatically, with a tilting movement. When the drawer (6) is closed, a spring mechanism (32) is placed under tension. The drawer (6) rides on a rail, and the automatic outwards movement is dampened by a silicon brake wheel.
