Abstract (en)

The filter has a number of circular resonant cavities (30,35) with coupling between them. An input waveguide leads to an input slot to the first cavity, and the cavities are connected sequentially, with input and output coupling slots at right angles between them. Two sets of cavities have waveguide slots (47,48) which provide feedback by coupling the power from a down line cavity and feeding it back into a coupling slot in a previous cavity. Coupling is provided via a magnetic field.

Abstract (fr)

L'invention concerne un filtre pseudo-elliptique comprenant des cavités résonantes (30 à 35) couplés entre eux positivement (36 à 40), l'entrée et la sortie de signal de chaque cavité (30 à 35) étant à 90° l'une de l'autre. Le filtre comprend au moins un rétro-couplage de signal entre deux de ces cavités (30, 33; 32, 35), réalisé sous forme d'un guide d'ondes (47; 48). L'invention s'applique aux filtres pseudo-elliptiques fonctionnant dans la bande millimétrique. <IMAGE>
