Abstract (en)
[origin: EP0779679A1] The wiring connector is made up of a number of long metallic slabs (11). Each slab has a top screw (14A,14B) screwed in place and a hole to clamp a base wire end in position. Each slab has an outer isolating cover (15) which shields the metallic section, leaving a hole for the input wire. The metallic structures plus isolating covers are held in position by end isolating material sections, which plug into the lengthwise section.
