Abstract (en)
The luggage has a flexible fabric bag (1) which is closed by a zip. It has a front pocket, a telescopic pulling handle (4) on its back and two wheels (5) in its bottom part. A base (6) under the front edge provides vertical stability when at rest. The bag is provided with two flexible straps on its back (1b) to enable it to be carried on a user's back. A flexible fabric flap (8) is fixed by one of its edges (8a) to the base of the luggage back, the edge acting as a hinge. In the wheeling position the flap is held by its opposite edge (8b) on the luggage back by two press button flaps (9). In this position the folding flap covers the lower portion of the straps and keeps them fastened.

Abstract (fr)
La présente invention concerne un bagage roulant. Le bagage de l'invention est muni de roulettes (5) et d'une poignée de traction (4) pour son transport en position de roulage, et comporte des moyens (7, 8) pour transformer le bagage en sac à dos. L'invention s'applique notamment au transport d'effets personnels par exemple. <IMAGE>
