Abstract (en)

The rotary decorating machine for ceramic tiles of the invention comprises: an impression cylinder (1); a transfer roller (3) acting in relative rotation in combination with the impression cylinder (1); a first roller (4) and a second roller (5), parallel one to another and provided with opposite motion directions, which in combination afford a funnel-shaped cavity into which glaze is fed. The second roller (5) is parallel to and in contact with the transfer roller (3) on a surface of which it rolls undraggingly. Above the funnel-shaped cavity a plurality of nozzles (6, 7 and 8) is arranged, each able independently to dispense a type of glaze in a batched dose. <IMAGE>
