Abstract (en)

[origin: EP0780822A1] The contactless transmission method uses a transceiver (12) at the base station (1) for transmitting a signal to the measuring point (2), to allow transmission of the measured data provided by an evaluation circuit from a sensor signal. The measuring point has a local current supply which solely provides the operating current for the evaluation circuit, the energy for transmission of the measured data obtained from the signal transmitted to the measuring point from the base station.
