Abstract (en)

[origin: EP0780934A1] The cable shunting mechanism is made up of flexible upper (2) and lower (3) channelised sections which join together. A metallic shunting section (9) passes across the channels. The shunting section has protruding tongue sections (11). Cables (16) with male end connectors (7) plug into the shunting element. An isolating material surrounds the wiring input. After assembly the flexible channels are wrapped round in a circular form.
