Abstract (en)
[origin: US5961049A] PCT No. PCT/CH95/00200 Sec. 371 Date Mar. 12, 1997 Sec. 102(e) Date Mar. 12, 1997 PCT Filed Sep. 11, 1995 PCT Pub. No. WO96/08614 PCT Pub. Date Mar. 21, 1996 Provided in the shower spray, which may also be connected, as a hand-held shower with a handle piece (110'), to a flexible water hose, are two optionally activable reservoirs (150') and two storage and supply chambers (160') which are assigned to said reservoirs and are intended for receiving ingredients. By means of a venturi nozzle arranged in the shower spray, with appropriate setting, ambient air can be taken in through the ingredients and aromatized as a result. This aromatized air is admixed to the through-flowing water jet at the venturi nozzle. There is no need for any external, voluminous containers or complicated valve mechanisms. The quantity and type of the ingredients to be admixed can be set directly on the hand-held shower spray by a control lever and metering screws (170').
