Abstract (en)
[origin: EP0781886A1] The holding components are formed as traverses (1) bridging over the track rail inner area and are fixed to the under side of the rails (3). The catchment components (9) are fixed to the traverses (1). The traverses extend laterally over the side of the rails turned away from the track rail inner area and are fixed on the extended parts further catchment components (4). The catchment components (9,14) support on distance holders (6) fixed on the traverses. The distance holders at different distances from a rail have differing heights. The gradient of the catchment components is defined through this height difference.
