Abstract (en)  
[origin: EP0782157A1] The contact carrying slide for a contactor switch comprises an insulating body (1) pierced by windows (124,134, 144), in each of which there is a contact bridge (21,31,41). Each window also accommodates a spring providing contact pressure (31,32,33). The slide is displaced by the mobile parts of an electromagnet forming part of the contactor. The spring acts on the opposite face to the contact face, adjacent to the contact bridge. The body of the slide has notches (121,131,141) extending between a window (124,134,144) and the visible face, in order to act on the high end of the associated spring.
