Abstract (en)

[origin: EP0782831A1] The product dispenser consists of a drawer (24) within the rigid box (1). The rigid box has two rims on it's inboard end which engage with horizontal flanges on a baseplate forming part of the shop fitting and a gate and ramp on it's outboard end. The products are placed in the drawer (24) and are under pressure to move to the front of the drawer from a spring loaded thrust block (28). The block is constrained to move evenly by a slider (29) in a groove (25) and the drawer is secured by feet (27) at one end and a peg in a hole at the other.
