Abstract (en)

In a capping unit for containers comprising a cap hopper, at least one capper and a line for supplying the caps from the hopper to the capper, a device for automatically ejecting all wrongly oriented caps from the supply line comprising a mechanical sensor for stopping the train of caps along the line, an optical member for detecting the wrongly oriented caps, a mechanical ejector controlled by the optical member that ejects the wrongly oriented cap through an opening formed in the line and closed by a spring-operated lid. <IMAGE>
