Abstract (en)

The monitoring method uses detection of temperature-dependent volume or pressure variations, for indicating an internal fault or oil leakage within the transformer. The detection is effected via at least one temperature-dependent contact (B1,B2) and a second contact (A) responsive to volume variations, displaced relative to one another to close a current circuit, activating a display or an alarm and/or initiating automatic cut-out of the transformer.

Abstract (de)

Verfahren und Vorrichtungen zur Ermittlung ungelöster Spaltgase in Isolierflüssigkeiten von Transformatoren zum Zweck der Überwachung und der Früherkennung von Fehlern oder eines Öllecks in Transformatoren mit Hilfe temperaturbezogener Volumen- oder Drucküberwachung. <IMAGE>
