Abstract (en)

[origin: WO9608207A1] The embodiments of the inventions disclosed in this application develop a "protection" electric, magnetic or electromagnetic field or fields which are either superimposed upon an ambient field which is detrimental to the health of living systems, or incorporated into the electrical circuit of the device which is generating the detrimental field. Either arrangement is successful in "confusing" living cells, and thereby reducing the harmful effects of the otherwise detrimental field.
