Abstract (en)  
[origin: WO9609309A1] A specific ligand for E- and P-selectin was isolated from in vivo [<sup>3</sup>H]-glucosamine labeled HL-60 cells by a combination of wheat germ agglutinin agarose and E- or P-selectin rlg-agarose chromatography. The total O-linked oligosaccharides on the purified molecule were released by alkaline hydrolysis in the presence of NaBH<sub>4</sub> and analyzed by ion-exchange, size-exclusion and paper chromatography in combination with specific exoglycosidase digestions. Various derived ligands and carbohydrates are claimed.
