Abstract (en)
[origin: EP0784017A1] The container (3), for a pourable mass especially a plastics paste for sealing insulation glass panes, has an upper connection (15) for a crane (16) or other lifter. Also claimed is a technique for delivery of the mass from the container where the opening is connected to a system which generates underpressure, to extract the contents for delivery to the workstation. As the mass is extracted, the upper end of the container is raised progressively. Advantage - The system ensures that the contents of the container are wholly extracted for use.
