Abstract (en)

Dyeing of fibrous materials containing wool with anionic dyes is carried out in the presence of a wool preservative containing acrylamide homo- or copolymer. Also claimed is the use of polyacrylamide homo- or copolymers as anti-setting agents in exhaustion dyeing of fibrous materials containing wool. Preferably the (co)polymer has a molecular weight of $800000-15 \times 10<6>$. It is a homopolymer of acrylamide or copolymer with acrylic acid or vinyl acetate, especially of 70-100 wt.% acrylamide and 0-30 wt.% acrylic acid or vinyl acetate. In particular, the copolymer contains ≥ 70 wt.% acrylamide, more particularly 75-90 wt.% acrylamide and 10-25 wt.% acrylic acid.; and the homo- or copolymer has a molecular weight of $(1-15) \times 10<6>$, more particularly $(1.5-3) \times 10<6>$. The (co)polymer is used as an aqueous formulation. It is used in the dyebath in an amount of 0.0001-2, especially 0.0005-1 g/l. The wool preservative also contains hydrogen peroxide (H_2O_2).

Abstract (de)

Beschrieben wird ein Verfahren zum Färben von wollhaltigen Fasermaterialien mit anionischen Farbstoffen, welches dadurch gekennzeichnet ist, dass man diese Materialien in Gegenwart eines Wollschutzmittels enthaltend mindestens ein Acrylamid-Homo- oder -Copolymer färbt. Nach dem Verfahren sind reibechte egale Färbungen mit reduziertem Setting erhältlich.
