Abstract (en)

[origin: EP0784132A1] A profiled element for dressing the edge of a structure (1), for example made of natural or artificial stone in building and decoration, comprising at least one profiled element which is adapted to constitute a dressing edge of said components, said profiled element having a flat rear face for coupling to a substantially vertical arrangement of the component that it must dress, said profiled element being provided with at least one anchoring laminar element (7) for anchoring between the structure (1) and an overlying cladding (2) which protrudes backwards from said flat rear face at a depth (H) from the top of said profiled element which is at least equal to the thickness of said cladding of said structure. <IMAGE>
