Abstract (en)
[origin: WO9636040A1] The invention pertains to the field of musical instruments and is a percussion instrument containing a sound-producing element in the form of a bell casing, a clapper mounted inside the casing and capable of swinging, a drive with a lever for displacing the clapper, and a base. The instrument is provided with a damper for damping the vibrations of the bell housing, a turntable mounted on the base, and elements on the lever of the clapper displacement mechanism for capturing the clapper. The damper and drive lever are mounted on the turntable so as to be capable of angular displacement.
