Abstract (en)  
[origin: WO9610976A1] An absorbent sanitary device (10) is provided, for example, an incontinence device for use by an adult female, the device (10) having a top side adapted in use to face the user, and a back side adapted to face away from the user. The device is elongate, and has a central region (12), and end regions (14, 16) which adjoin the central region (12), and which slope upwardly from the central region (12) as viewed from the top side. The device is provided with upstanding, elasticated, spaced apart barriers which extend longitudinally of the device adjacent laterally opposite side edges thereof and which, in cooperation with the end regions, define a user-engaging surface, the barriers being formed by upstanding portions of the topsheet.
