Abstract (en)

[origin: WO9611829A1] Method and arrangement for roll-on/roll-off loading and unloading respectively of goods train sets, which mainly are intended for high speed transport of complete vehicles or vehicle trains as well as load carrying platforms and/or containers. By turning a load carrying portion (2b) from its normal position in the length direction of the train set to which it belongs, loading and unloading is made possible in that the load carrying portion (2b) is turned around a vertical shaft coupling (18) of turntable type at one end portion of the wagon by the use of an entrance and exit ramp (5) in a carry and drive arrangement (23), whereafter the goods is loaded/unloaded with its ordinary load carrier by the use of the entrance ramp.
