Abstract (en)

[origin: WO9611255A1] The present invention relates to a granular solid composition which is free-flowing and water soluble, comprising a liquid ingredient selected amongst liquid non aqueous surfactants and silicone fluids, captured in a solid organic, mineral or organomineral matrix formed in situ from at least one organic or mineral precursor, in the form of liquid miscible with said liquid ingredient to be captured or in the form of a solid which can be suspended in the liquid ingredient to be captured. Said composition which may be easily incorporated in a powder detergent composition is used as a carrier for the liquid ingredient.
