Abstract (en)
[origin: WO9607063A1] A small case in the form of a vanity case is fitted with an electric cooling unit (133) having a Peltier element integrated into a wall section (123) of the case in such a way that the cold side (149) is in communication with the inside of the case and the hot side with the outer atmosphere. It is possible with such a small case safely to transport and store heat-sensitive products, e.g. immediately required supplies of medicaments and/or cosmetics, even when outside temperatures are high. The case (110) is small, light and easy to handle and can attain a temperature substantially below body temperature.
