Abstract (en)

[origin: WO9610830A1] In order to ensure the complete and reliable drying of material in a container (2), especially contaminated waste from a nuclear power station, using a low-power-consumption drying station (1) with a short drying time, the invention provides for at least one heating mat (3) to supply the container (2) with heat for evaporation. When the container (2) is set to the drying position, a retainer automatically ensures contact over a large area between the heating mat (3) and the container (2).
