Abstract (en)

[origin: EP0785318A1] The cover sections (2), with their upper (3) and lower (4) edge areas, are releasably connected with the holders (1). Each cover section, with its upper or lower edge area, is connected to one or more holders by one or more couplings. Each cover section is pivotable around one or two horizontal axes, which run within or outside the upper or lower edge area of the cover sections. The releasable connections formed by the couplings (5) are locked between the upper or lower edge areas of the cover sections and the holders. The coupling halves of the holders are formed by pivot members.
