Abstract (en)

[origin: WO9516080A1] The present invention relates to a coating method used in a fluid. In order to lay coating in a simpler and quicker manner, a shield (1) is fitted against the surface of the object (2), the shield being open on the side or sides fitted against the surface of the object, in which case a space substantially isolated from the environment is created inside the shield (1) by means of the shield (1) and the surface of the object (2); gas is fed into the shield (1) in order to replace the fluid contained therein by gas, whereby the gas feed causes the fluid to be discharged from the shield, and, the coating is sprayed onto the object (2) through a spray nozzle (8) located inside the shield. The present invention also relates to an apparatus for using the method.
