Abstract (en)  
[origin: WO9633318A1] A device for directly removing odours from toilet bowls is disclosed. The device is suitable for extracting bowel movement odours as they are released directly into the toilet bowl, so that they do not spread around the room. Said device consists of a suction pipe (T) with slots (F) drawing the odours towards a miniature extractor (A) located behind and outside the bowl for removing odours from the room via an extractor tube (E). The suction pipe is attached to a member (P) shaped to fit the rim of the bowl for sealing and supporting the device between the bowl and the seat by means of hooks (K). Said device is particularly suitable for extracting and removing foul odours from public and private toilet bowls.
