Abstract (en)
[origin: EP0786212A2] A metal press-stud component (10), which comprises a plate-like base (11) provided with a member for fixing to an element with which it cooperates for the anchoring of the press-stud (10) to the fabric. The component also comprises a dome (12) which is associated, upon assembly, with the base (11) by folding its edge (13) over the edge of the base (11) and is adapted to be machined in relief and/or in bas-relief to form lettering, symbols, designs, or the like. The component comprises, in an interspace formed between the base (11) and the dome (12), a filler element (16) made of non-flexible material which is deposited in the fluid phase and hardened, and shaped complementarily to the surface of the dome (12). <IMAGE>
