Abstract (en)

A shelving/display and merchandising system for stores includes, (as shown in Figure 1) a pair of elongate channel-section runner elements (10) intended to be mounted in a vertically spaced horizontal arrangement. Vertical post members (12) are fitted to the runner elements (10) and provide support for brackets. Each runner-element (10) has its upper and lower side flanges formed with a row of slots (10a) and the post members have tongues (12b, 12c) to co-act with these slots. The tongue (12c) is shorter than the other to enable mounting and dismounting of the post members on the runner elements with the latter fixed in place. <IMAGE>
