Abstract (en)

[origin: EP0786327A2] The unit has two delivery feeders (4, 5) located between a feed (1) and a doubling conveyor (9). They are inclined downwards in opposite directions. By their lower ends, the feeders can swivel in the direct proximity of the doubling conveyor. They are variably positioned on one run-out of the feed unit so that webs (2) can be placed automatically on the doubling conveyor, or on the webs already on their. They can also be changed over.
