Abstract (en)

An aluminium cooking utensil is at least partly coated with enamel containing no pigment or only a small amount of colouring pigment, so that the underlying metal surface is visible through the enamel.

Abstract (fr)

La couche d'émail recouvrant le métal de l'ustensile culinaire est dépourvue ou faiblement chargée de pigments de coloration de façon à être suffisamment transparente afin de laisser percevoir la texture de surface du métal sous-jacent.
