Abstract (en)

[origin: DE4437049A1] New herbicide active substance combinations consist of: 1) a carbamoyltriazolinone having formula (I) and 2) a heteroaryloxyacetamide having formula (II), in which R<6> stands for optionally substituted heteroaryl and R<1> to R<5> have the meanings given in the description. In certain determined weight ratios, these combinations have synergistic effects and may be used as selective herbicides in various cultures of useful plants (for example maize and soybean). They successfully control even weeds that are otherwise difficult to control, such as Portulaca and Xanthium species of weeds.
