Abstract (en)

Bindings are mounted on snow-boards etc. using a fastening plate (1) which contains a pattern of holes (6,7) to allow attachment to the snow-board with screws. The hole pattern allows two-dimensional adjustment of the plate in two directions which are perpendicular to one another and parallel to the upper side of the snow-board. Preferably the fastening plate is circular and fits into a corresponding circular opening of a base part of the binding. The pattern comprises long rows of holes and parallel short rows of holes. Slots may be provided in place of circular holes. A central hole (4) is preferably provided for identification of a mark on the snow-board.

Abstract (de)

Zur Aufnahme von Befestigungsschrauben ist ein Lochmuster vorgesehen, welches so ausgebildet ist, daß eine zweidimensionale Verstellung des Halteiles bzw. der Befestigungsplatte und damit der Bindung relativ zu Befestigungspunkten am Snowboard od.dgl. ermöglicht wird. <IMAGE>
